"Cloning and sequencing of a 2.5-dichloro-2,5-cyclohexadiene-1,4-diol
dehydrogenase gene involved in the degradation of gamma-
hexachlorocyclohexane in Pseudomonas paucimobilis.";
J. Bacteriol. 176:3117-3125(1994).
-!- PUNCTION: DEGRADATION OF 2,5-DICHLORO-2,5-CYCLOHEXADIENE-1,4-DIOL
(2,5-DDCL) INTO 2,5-DICHLOROHINONE (2,5-DCHQ).
-!- PATHWAY: Gamma-hexachlorocyclohexane degradation; third step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EMBL; D14595; BAA03444.1; -.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC (a) separately contacting several cell populations expressing a cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC replacing the mitochondrial targeting sequence (residues 1-55 of (I)), CC and residues 56-60 of (I)) and an inhibitor of BID (BC12 interacting CC (b) incubating the cell populations with a direct stimulus of the cell domain) with a compound to be tested for apoptotic inhibiting activity; (b) incubating the cell populations with a direct stimulus of the cell death pathway; and (c) measuring the specific apoptotic activity of the cell populations, where inhibition of the specific apoptotic activity is indicative that the compound is an inhibitor of apoptosis. (I) and (II) CC are useful for inducing apoptosis in a cell. The Smac polypeptide and cell polynucleotide are useful for stimulating apoptosis in a neoplastic or tumour cell which overexpresses an inhibitor of caspase-7 or CC caspase-9. Preferably, the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-7 or CC caspase-9. Preferably, the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-CC mediated apoptosis which involves contacting a cell transformed or CC call viability indicates the presence of an inhibitor and decrease in CC cell viability indicates the presence of an enhancer. Optionally, the cell viability indicates the presence of an enhancer optionally, the cell viability indicates the presence of large and small caspase coll viability indicates the presence of large and small caspase in the presence of an enhancer. Optionally, the cell viability indicates the presence of large and small caspase to cell viability indicates the presence of large and small caspase the presence of an enhancer. Preferably, the large and small subunits of caspase-7 or caspase-7 or caspase-9 are detected. (I) is also useful for cidentifying a compound that inhibits smac binding to Smac-binding correspondence of an 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Inhibitor of apoptosis (IAP) protein Smac, mutant Smac-N39

```
The invention relates to an isolated Smac peptide or polypeptide (I) CC and an isolated nucleic acid (II) encoding (I). Also described is a CC method of identifying a compound that inhibits apoptosis, comprising: CC (a) separately contacting several cell populations expressing a CC replacing the mitochondrial targeting sequence (residues 1-55 of (I)), CC and residues 56-60 of (I)) and an inhibitor of BID (BCl2 interacting CC domain) with a compound to be tested for apoptotic inhibiting activity; (C) includating the cell populations with a direct stimulus of the cell (CC (b) includating the cell populations with a direct stimulus of the cell cell pathway; and (c) measuring the specific apoptotic activity is condicative that the compound is an inhibitor of apoptosis. (I) and (II) CC are useful for inducing apoptosis in a neoplastic or tumour cell which overexpresses an inhibitor of caspase-7 or CC caspase-9. Preferably, the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-CC mediated apoptosis which involves contacting a cell transformed or transforted with a vector expression (I) with a centilete inhibitor.
                                                                                                                                                                                                                                         transfected with a vector expressing (I) with a candidate inhibitor or candidate enhancer; and detecting cell viability, where an increase in cell viability indicates the presence of an inhibitor and a decrease in cell viability indicates the presence of an enhancer. Optionally, the method involves detecting the presence of large and small caspase subunits after contacting cell transformed with the vector expressing (I), with the candidate compound. A decrease in processing indicates the presence of an enhancer. Preferably, the large and small subunits of caspase-3, caspase-7 or caspase-9 are detected. (I) is also useful for identifying a compound that inhibits Smac binding to Smac-binding or BID3.
                                                                                                                                                                      identifying a compound that inhibits Smac binding to Smac-binding molecule (a portion of IAP e.g. a BIR domain such as BIR1, BIR2 or BIF or a full-length IAP). (II) is useful in gene therapy techniques. The present sequence represents the amino acid sequence of Smac peptide
                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 4; Page 47; 78pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       overexpresses inhibitor of caspase, and modulating compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel Smac peptides and polynucleotides encoding the peptides, useful for stimulating apoptosis in neoplastic or tumour cell which overexpresses inhibitor of caspase, and for identifying apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (UYJE-) UNIV JEFFERSON THOMAS.

CC (a) separately contexting several cell populations expressing a CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC cytosolic Smac (a) and an inhibitor of BID (Bcl2 interacting activity; CC and residues 56-60 of (I)) and an inhibitor of BID (Bcl2 interacting activity; CC (b) incubating the cell populations with a direct stimulus of the cell cell pathway; and (c) measuring the specific apoptotic activity of the CC indicative that the compound is an inhibitor of apoptosis. (I) and (II) CC are useful for inducing apoptosis in a cell. The Smac polypeptide and CC polynucleotide are useful for stimulating apoptosis in a neoplastic or tumour cell which overexpresses an inhibitor of caspase-3, caspase-7 or CC caspase-9, Preferably, the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-CC mediated apoptosis which involves contacting cell transformed or transfected with a vector expressing (I) with a candidate inhibitor or candidate inhibitor or candidate inhibitor or call viability indicates the presence of an enhancer. Optionally, the cell viability indicates the presence of an enhancer optionally, the cell viability activates the presence of an enhancer. Optionally, the contacting cell transformed with the vector expressing cell transformed with the vector expressing cell caspase in cell viability and an inhibitor and an increase in the processing indicates the presence of an enhancer. Preferably, the large and small caspase the compound that inhibits Smac binding to Smac Phinding contacting cell transformed with the vector expressing indicates the presence of an enhancer. Preferably, the large and small caspase of cell viability and call transformed with the processing indicates the presence of an enhancer. Preferably the large

Also described is a method of identifying a compound that inhibits apoptosis, comprising:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel Smac peptides and polynucleotides encoding the peptides, useful for stimulating apoptosis in neoplastic or tumour cell which overexpresses inhibitor of caspase, and for identifying apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-AUG-2000; 2000US-227735P.

The invention relates to an isolated Smac peptide or polypeptide (I) cand an isolated nucleic acid (II) encoding (I). Also described is a comethod of identifying a compound that inhibits apoptosis, comprising: CC (a) separately contacting several cell populations expressing a cytosolic Smac (a Smac isoform that begins with MKSDPYF sequence, CC replacing the mitochondrial targeting sequence (residues 1-55 of (I)), CC and residues 56-60 of (I)) and an inhibitor of BID (BCl2 interacting CC domain) with a compound to be tested for apoptotic inhibiting activity of the cell populations, where inhibition of the specific apoptotic activity of the cell populations, where inhibition of the specific apoptotic activity is CC indicative that the compound is an inhibitor of apoptosis. (I) and (II) are useful for inducing apoptosis in a cell. The Smac polypeptide and CC polypucleotide are useful for stimulating apoptosis in a neoplastic or tumour cell which overexpresses an inhibitor of caspase, where the CC inhibitor inhibits activation or activity of caspase-3, caspase-7 or CC caspase-9. Preferably, the cell overexpresses at least a portion of IAP. CC ill is useful for identifying an inhibitor or enhancer of a caspase-CC mediated apoptosis which involves contacting a cell transformed or call viability indicates the presence of an inhibitor and a decrease in CC cell viability indicates the presence of an inhibitor and a decrease in CC cell viability indicates the presence of an inhibitor and a decrease in CC cli viability indicates the presence of an inhibitor and a decrease in the processing indicates the presence of an inhibitor and small caspase in cell viability indicates the presence of an inhibitor and small subunits of CC aspase-3, caspase-7 or caspase-9 are detected. (I) is also useful for identifying a compound that inhibits Smac binding to Smac-binding conditions of IAP e.g. a BIR domain such as BIR1, BIR2 or BIR3, CC present sequence represents the N-terminal amino acid sequence of Smac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel Smac peptides and polynucleotides encoding the peptides, useful for stimulating apoptosis in neoplastic or tumour cell which overexpresses inhibitor of caspase, and for identifying apoptosis modulating compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAU78430 standard; Peptide; 40 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neoplastic cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAU78430;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 3; Fig 7; 78pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local
        binding molecule that specifically binds to DIABLO or its fragment, detecting DIABLO in a biological sample (by contacting the sample with an IAP and detecting the presence of an IAP/DIABLO complex), modulating the death of a cell (by contacting a cell with an agent, which modulates the level and/or functional activity of a polypeptide), a composition for treatment/prophylaxis of a DIABLO relate condition comprising an agent which reduces the level/activity of a polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is useful for screening for an agent which modulates cell death. An antigen binding molecule is useful for detecting DIABLO in a biological
                                                                                                                                                 The invention relates to an isolated pro-apoptotic polypeptide, designated DIABLO, or its biologically active fragment of 8 amino aci in length. Also included are the polypucleotide encoding DIABLO, expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (1 with a fragment of the polypeptide, and detecting a reduction in acti of the IAP), producing a natural or synthetic variant of DIABLO with cell death activity or which reduces IAP activity, an antigential or synthetic variant of the polypeptide in the polypeptide in the polypeptide in activity or which reduces IAP activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              autoimmune disease; neurodegenerative disease; hepatic muscular tissue damage; heart attack; hepatic tissue damage; liver disease; immunogen.

            neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammatory activities, and can be u in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used
                                                                                                                AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to AAB54466. The human pancreatic cancer antigens have cytostatic,

                                                                            The present sequence is the human Smac protein. Its coding sequence was isolated by purifying the protein and searching a HeLa cell cDNA library for sequences which bound to probes based upon it. Smac is a mitochondrial protein which is released into the cytosol during apoptosis, and acts as a caspase-3 activator. The protein and its coding sequence can be used to modulate the expression and function of caspases and their activators, and also can be used as drug targets and regulators to promote or inhibit apoptosis in the treatment of cancer and autoimmune and neurodegenerative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular,
                                                                                                                                                                                                                                                Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Q
The invention relates to an isolated Smac peptide or polypeptide (I) cand an isolated nucleic acid (II) encoding (I). Also described is a commethod of identifying a compound that inhibits apoptosis, comprising: CC (a) separately contacting several cell populations expressing a CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC replacing the mitochondrial targeting sequence (residues 1-55 of (I)), CC and residues 56-60 of (I)) and an inhibitor of BID (BC12 interacting cC domain) with a compound to be tested for apoptotic inhibiting activity; (b) incubating the cell populations with a direct stimulus of the cell ceath pathway; and (c) measuring the specific apoptotic activity of the CC indicative that the compound is an inhibitor of apoptosis. (I) and (II) are useful for inducing apoptosis in a cell. The Smac polypeptide and CC polynuclectide are useful for stimulating apoptosis in a neoplastic or tumour cell which overexpresses an inhibitor of caspase-3, caspase-7 or CC caspase-9. Preferably, the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-CC mediated apoptosis which involves contacting a cell transformed or transfected with a vector expressing (I) with a candidate inhibitor or call viability indicates the presence of an inhibitor and a decrease in CC cell viability indicates the presence of an inhibitor apparesing cC (I), with the candidate compound. A decrease in processing indicates the presence of an inhibitor and an increase in the processing indicates the presence of an anhancer. Preferably, the large and small caspase contacting a cell transformed contacting an inhibitor and an increase in processing indicates the presence of an enhancer. Preferably, the large and small subunits of the presence of an inhibitor and an increase in the processing indicates the presence of an enhancer. Preferably, the large and small subunits of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel Smac peptides and polynucleotides encoding the peptides, useful for stimulating apoptosis in neoplastic or tumour cell which overexpresses inhibitor of caspase, and for identifying apoptosis modulating compounds

                                                                                                                                                 The present sequence is the protein sequence for human DIABLO/Smac, an inhibitor of inhibitor-of-apoptosis (IAP) proteins. The invention provides a nucleic acid, such as an antisense coliquoucleotide, which specifically hybridises to a nucleic acid encoding a protein that induces cell death, especially APAFI, RAIDD or Diablo/SMAC. A claimed method for inhibiting a cell's death cell with the nucleic acid under conditions permitting the nucleic acid under conditions permitting the nucleic acid under conditions permitting the nucleic acid to enter the cell, especially the use of a vector, liposome, or a mechanical or electrical means. The method is used to a treat a neurodegenerative disorder, especially a brain disorder or central nervous system disorder, or a heart disorder, especially cardiomyopathy, in a human (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      γ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 caspase-3, caspase-7 or caspase-9 are detected. (1) is also useful for identifying a compound that inhibits Smac binding to Smac-binding molecule (a portion of IAP e.g. a BIR domain such as BIR1, BIR2 or BIR3, or a full-length IAP). (II) is useful in gene therapy techniques. The present sequence represents the amino acid sequence of Smac protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Fig 23A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Troy

                                                          Qy
                                                                                                                                                                                                                                                                                                      cancer patient. The method involves (a) measuring a level of a tumour up-
cregulated CARD-containing antagonist of caspase-9 (TUCAN) in a neoplastic
cell-containing sample from the cancer patient; and (b) comparing the
level of TUCAN in the sample to a reference level of TUCAN, where a low
level of TUCAN in the sample correlates with increased survival of the
patient. Alternatively, the method involves measuring levels of TUCAN and
one or more biomarkers selected from the group of cIAP2, Apaf1, Bcl-2, or
Smac in a neoplastic cell-containing sample from the cancer patient. The
method is useful for determining if the patient is at risk for relapse,
or for determining a proper course of treatment for a patient with
cancer. The method is also useful for monitoring the effectiveness of a
course of treatment for a patient with cancer, e.g. colon cancer,
leukemia, CNS cancer, breast cancer, ovarian cancer, lung cancer. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Дb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δõ

  rne invention relates to an isolated pro-apoptotic polypeptide, designated DIABLO, or its biologically active fragment of 8 amino acids in length. Also included are the polynucleotide encoding DIABLO, expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP) with a fragment of the polypeptide, and detecting a reduction in activity of the IAP), producing a natural or synthetic variant of DIABLO with cell death activity or which reduces IAP activity, an antigenbinding molecule that specifically binds to DIABLO or its fragment, detecting DIABLO in a biological sample (by contacting the sample with an IAP and detecting the presence of an IAP/DIARIO commits.)
                                                                                                                                                                                                                  WPI;
                                                                                                                                         Claim 1;

Best Local :
The invention relates to an isolated pro-apoptotic polypeptide, designated DIABLO, or its biologically active fragment of 8 amino acids in length. Also included are the polypucleotide encoding DIABLO, expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP) with a fragment of the polypeptide, and detecting a reduction in activity of the IAP), producing a natural or synthetic variant of DIABLO
                                                                                                                                                                                                                                                                                   Disclosure; Page 35; 50pp; English
                                                                                                                                                                                                                                                                                                                                                                                        New pro-apoptotic polypeptide, useful for screening for agents which modulate cell death and for treating conditions associated with cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Verhagen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       agent, which modulates the level and/or functional activity of a polypeptide), a composition for treatment/prophylaxis of a DIABLO relational condition comprising an agent which reduces the level/activity of a polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is useful for screening for an agent which modulates cell death. An antigen-binding molecule is useful for detecting DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-JUL-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 to the complementary strand of a polynucleotide which comprises one of complementary strand of a polynucleotide which comprises one of coligonucleotide comprises at least 15 nucleotides; or (b) a combination cof an oligonucleotide comprises as sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a composition of comprises a 3'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence, and the combination of composition of the specification. The primer sets can be used in antisense therapy and composition of the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the composition of the composition of the composition of the proteins encoded by cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CAAB95893 represent human cald sequences; AAB92446 to CC conservation of the proteins encoded by cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC conservation of the proteins encoded by cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC conservation of the proteins encoded by cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC conservation of the proteins encoded by cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC conservation of the proteins encoded by cDNAs easily without any specialised methods. AAH03166 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the proteins encoded by conservation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                 Novel peptide derived from wild-type human second mitochondria activator of caspase protein useful for identifying candidate substances to kill cancerous cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-AUG-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a peptide derived from wild-type human consecond mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pilling (DIABLO). The peptide is one of 12 claimed smac (DIABLO)-derived peptides (see ABB76208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. CLAIMED (SMAC) and SMAC (SMAC) and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
The invention relates to polynucleotides encoding an Omi (serine protease) peptide or polypeptide. The Omi peptide specifically binds to portion of an Inhibitor of Apoptosis Protein (IAP). The Omi polypeptide induces caspase independent apoptosis, or fails to have serine protease activity. The Omi peptides are useful for regulating or altering apoptosis, specifically caspase-mediated apoptosis, and as immunogens for
                                                                                                                                                                                                                       apoptosis proteins, useful for regulapoptosis and for treating cancer,
                                                                                                                                                                                                                         New Omi nucleic acids and peptides that bind to an inhibitor of apoptosis proteins, useful for regulating or altering caspase-mediated apoptosis and for treating cancer, tumor, or autoimmune diseases .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13-JUL-2001;

probable membrane protein YML023c - yeast (Saccharomyces cerevisiae)
C;Species: Saccharomyces cerevisiae
C;Date: 13-Jan-1995 #sequence_revision 10-Feb-1995 #text_change 19-Apr-2002
C;Accession: S49754
R;Badcock, K.; Churcher, C.
submitted to the EMBL Data Library, November 1994
A;Reference number: S49741
A;Accession: S49754
A;Accession: S49754
A;Molecule type: DNA
A;Residues: 1-556 <BAD>
A;Cross-references: EMBL:246659; NID:9575680; PID:9575696; GSPDB:GN00013; MIPS:YML023c
